

# Be well prepared before you hit the road

## How does the onboard unit work?

In the Netherlands, truck owners will pay per kilometre from 1 July 2026. Each truck needs a working onboard unit. This will help you prepare properly.

1

The owner of a truck concludes a contract with a service provider.

2

The owner becomes a client of the service provider. The service provider sends the owner the onboard unit.

3

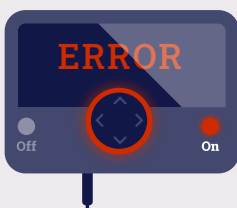

The owner ensures that the onboard unit is installed in the truck. Attention: it is recommended to have the onboard unit built in.

4

The onboard unit registers the mileage of the truck.

5

Is your onboard unit not working (properly)? Report it to the service provider.

6

Get a (new) working onboard unit within 3 hours. This is to avoid a fine.

[trucktoll.nl](https://trucktoll.nl)

**Attention!** Make sure your onboard unit is always on while driving. Even on roads exempt from the truck toll.
